Problem Statement

Urban drivers waste up to 20 minutes searching for parking, leading to fuel waste, stress, and city congestion. Existing solutions are fragmented and lack real-time accuracy.

 **20** minutes wasted per trip searching for parking in busy urban areas.

 **30%** of city traffic is caused by drivers circling to find available parking spaces.

Market Opportunity

Smart Parking

Market Growth

The global smart parking market is projected to grow exponentially, driven by smart city initiatives, rising vehicle ownership, and the urgent need to address urban congestion and pollution.

Solution Overview

ParkSpot unifies crowd-sourced driving data, real-time drone imagery, and camera vision to instantly locate open parking. Users get map-based guidance to the nearest free spots—public, off-street, or curbside.

Multi-source data fusion combines user reports, drone surveillance, and fixed camera feeds for 95% detection accuracy.

Real-time navigation guides users to available spots with turn-by-turn directions and availability predictions.

Technology Stack

Our multi-layered approach combines mobile, IoT, AI, and cloud technologies to create a comprehensive parking detection system that's accurate, scalable, and real-time.

 Mobile App Interface

 Crowd-sourced Data

 Computer Vision

 Cloud Platform

 Real-time APIs

**iOS & Android
apps with intuitive**

maps

**Vehicle sensors &
user reports**

**Drones & camera
networks**

**Data fusion &
analytics**

**Maps &
notifications**

Competitive Advantage

What Makes ParkSpot Unique:

While other parking apps focus on paid reservations or single data sources, ParkSpot combines multiple detection methods with a free-first business model to maximize user adoption and real-time accuracy.

01
Multimodal detection (crowd, drones, cameras)

02
Real-time accuracy

03
Free basic features

04
Community-driven
growth

05
Scalable deployment

Business Model

Revenue Streams & Monetization Strategy

ParkSpot combines free services with premium options to drive adoption while building sustainable revenue channels through multiple stakeholders.

Free tier for end users (public spot detection)

Premium subscriptions (reservations, alerts, analytics)

Partnership revenue (cities, venues, businesses)

Location-based advertising & sponsored listings
